

Anaconda AI Navigator

Secure access to large language models (LLMs)

Available to all desktop customers at all tiers, AI Navigator provides access to a variety of LLMs with various parameter counts, sizes, and capabilities levels so you can find the right model for your specific device, all in a secure desktop environment. Choose from over 200 pre-trained LLMs, consisting of 50+ models, each with four different quantization levels, allowing you to find the right model for your project. Because Anaconda AI Navigator lives on your desktop, you can interact with local LLMs while keeping your data private.

AI Navigator operates seamlessly on your local machine, harnessing the full power of your computer's hardware to deliver optimal performance. Anaconda curates, tests, and validates all models to streamline workflows and kickstart your generative AI projects. Get actionable insights, creative ideation, and convenient help from the built in AI-powered chatbot to supercharge your work and iterate faster. AI Navigator also comes with an API server to serve any LLM in our offerings for AI app creation, right from your local computer.
